Sura 19, verse 98

The last verse in Sura 19 is verse 98.

Verse 19:98 is the 2346th verse from the beginning of the Quran and 2346 is the 1998th composite. It is also the 572nd revealed verse in the initialed Suras.

The 572nd twin Gaussian prime pair is (89563, 89567). Note a Gaussian prime is a prime number which is NOT factorable in the complex domain. For example prime number 17 is not a Gaussian prime because it is the product of two complex numbers $(4 - i)$ and $(4 + i)$. Recall, $i = \sqrt{-1}$. Twin Gaussian primes are those Gaussian primes that differ by 4, such as (19, 23).

Gaussian prime 89567 is the 1143rd sequential twin Gaussian prime and 1143 = 9 x 127. Furthermore, the 1143rd composite is 1362 which is the number of verses from 1:1 to 9:127.

Recall that the order of revelation of the verses are independent of the number verses in Sura 9.

Furthermore, we note that the 572nd composite is 698. The function of the number 698 is to generate the revelation order of sura 19 which happens to be 6th initialed sura revealed. Let me point out that the 572 is the number of verses revealed in the initialed suras which corresponds to the 6th revealed sura verse 98.
