

Sura 9:127

1362 670 6231 3488 790 317 127

790 : Number of verses with the word “Allah”

**317 : Number of verses with a prime number
as the verse number**

Sura 9:127

- Fermat's Little Theorem:
- A Composite " $C = 2^p - 2$ " is only divisible by p if p is prime.

But, not so fast!

The first number p that fails this rule is the composite $341 = 11 \times 31$. In number theory 341 is referred to as a "**pseudo-prime**"

Sura 9:127

- Fermat (1601 – 1665)
- Only now we know about 341 as pseudo prime.
- Let us see how 341 folds in with the two Quranic numbers 790 and 317.

Sura 9:127

- **317 + 341 = 658**
- **658 is the index of composite 798 which is the frequency of the initials K.H.Y.A.S. is sura 19. But also note;**
- **3 + 1 + 7 + 3 + 4 + 1 = 19**
- **6 + 5 + 8 = 19**

Sura 9:127

- **790 + 341 = 1131**
- **1131st prime is 9127**
- **Sura 9 has 127 verses.**
